

Plastic Mould Steel

BM1.2738MOD

1.2738MOD is a plastic mould steel. Additions of vanadium are made to increase the achievable work hardness and improve the tempering resistance. This grade achieves a homogenous hardness distribution.

Chemical Composition

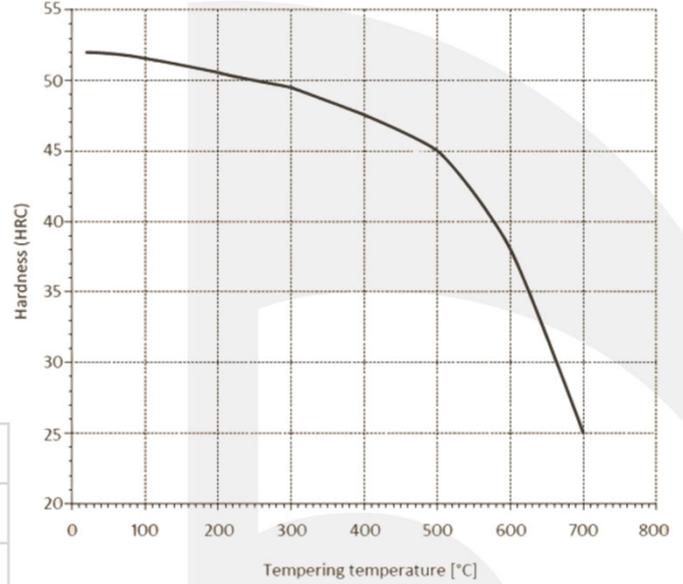

0.28 % C	0.15 % Si	1.40 % Mn	1.00 % Ni
1.30 % Cr	0.50 % Mo	0.12 % V	

Applications

1.2738MOD is typically used for relatively low temperature applications such as injection molds, synthetic plastic molds, particularly suitable for large molds in different fields of industry.
